☰ Projects

IoT based Smart Irrigation System

Company: University Of Okara

Tools: Programming , Arduino, NodeMCU ESP8266, Soil Moisture Sensor Module, Water Pump Module, Relay Module, DHT11 Connecting Wires

The Smart irrigation System has wide scope to automate the complete irrigation system. Here we are building a IoT based Irrigation System using ESP8266 NodeMCU Module and DHT11 Sensor. It will not only automatically irrigate the water based on the moisture level in the soil but also send the Data to ThingSpeak Server to keep track of the land condition. The System will consist a water pump which will be used to sprinkle water on the land depending upon the land environmental condition such as Moisture, Temperature and Humidity.

Digital Car parking System

Company: University Of Okara

Tools: C++ Programing

I this Project we will create a digital car parking system. We Install this system on main gate of parking area.. And we will set the limit of different type of vehical . When the Limit off car parking is Full filled than Gate will be auto lock. If any Car wnats to exist so gate will be open automatically.
